Figure 1 is a line graph showing the time course of the effect of 100 mg/kg of diazepam on the plasma concentration of diazepam in rats. The y-axis is labeled 'Plasma concentration (μg/ml)' and ranges from 0 to 10. The x-axis is labeled 'Time (h)' and ranges from 0 to 12. There are two data series: a solid line with open circles representing the control group and a dashed line with open circles representing the diazepam-treated group. The control group shows a steady increase in plasma concentration over time, reaching approximately 10 μg/ml at 12 hours. The diazepam-treated group shows a much lower plasma concentration, remaining below 2 μg/ml throughout the 12-hour period. A vertical dashed line at 2 hours indicates the time of administration.
