1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

The first of these is the fact that the
 government has been unable to
 raise the necessary funds to
 carry out its policy. This is
 due to a combination of
 factors, including the
 high cost of borrowing
 and the low level of
 savings. The second
 factor is the fact that
 the government has
 been unable to
 attract foreign
 investment. This is
 due to a number of
 reasons, including the
 high level of
 inflation and the
 low level of
 economic growth.

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes. Once the causes have been identified, the next step is to develop a plan to address the problem. This involves identifying the actions that need to be taken to address the problem and determining the resources that will be needed to implement the plan. Finally, the last step in the process is to implement the plan and monitor the results. This involves putting the plan into action and tracking the progress of the plan to ensure that the problem is being addressed effectively.

1. *Chlorophyll a* (Chl *a*) and *Chlorophyll b* (Chl *b*) were determined using the method of Arar and Collins (1971). The concentration of Chl *a* and Chl *b* was expressed as $\mu\text{g mL}^{-1}$ of the sample.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

| Variable | Coefficient | Standard Error | t-statistic | p-value |
|--|-------------|----------------|-------------|---------|
| Age of the head of household | 0.001 | 0.000 | 1.2 | 0.23 |
| Gender of the head of household (Male = 1, Female = 0) | -0.05 | 0.02 | -2.5 | 0.01 |
| Constant | 1.5 | 0.1 | 15.0 | 0.00 |

The results indicate that the age of the head of household has a small positive effect on the number of children in the household, while the gender of the head of household has a small negative effect. The constant term is significantly positive.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.
