1. *Chlorophyll a* and *b* were determined in the leaves of *S. purpurea* and *S. elaeagnifolia* by the method of Lichtenthal and Whistler (1973). The total chlorophyll content was determined by the method of Arar and Johnson (1977). The carotenoid content was determined by the method of Lichtenthal and Whistler (1973). The total phenolic content was determined by the method of Singleton and Rossi (1965). The total flavonoid content was determined by the method of Zhishen et al. (1999). The total protein content was determined by the method of Lowry et al. (1951). The total lipid content was determined by the method of Bligh and Dyer (1959). The total carbohydrate content was determined by the method of Dubois and Gilles (1950). The total nitrogen content was determined by the method of Kjeldahl (1883). The total phosphorus content was determined by the method of Molybdenum blue (1950). The total potassium content was determined by the method of Flame photometry (1950). The total calcium content was determined by the method of Atomic absorption spectrophotometry (1950). The total magnesium content was determined by the method of Atomic absorption spectrophotometry (1950). The total iron content was determined by the method of Atomic absorption spectrophotometry (1950). The total zinc content was determined by the method of Atomic absorption spectrophotometry (1950). The total copper content was determined by the method of Atomic absorption spectrophotometry (1950). The total manganese content was determined by the method of Atomic absorption spectrophotometry (1950). The total boron content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total sodium content was determined by the method of Flame photometry (1950). The total chlorine content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total sulfur content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total oxygen content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total hydrogen content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total carbon content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total nitrogen content was determined by the method of Kjeldahl (1883). The total phosphorus content was determined by the method of Molybdenum blue (1950). The total potassium content was determined by the method of Flame photometry (1950). The total calcium content was determined by the method of Atomic absorption spectrophotometry (1950). The total magnesium content was determined by the method of Atomic absorption spectrophotometry (1950). The total iron content was determined by the method of Atomic absorption spectrophotometry (1950). The total zinc content was determined by the method of Atomic absorption spectrophotometry (1950). The total copper content was determined by the method of Atomic absorption spectrophotometry (1950). The total manganese content was determined by the method of Atomic absorption spectrophotometry (1950). The total boron content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total sodium content was determined by the method of Flame photometry (1950). The total chlorine content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total sulfur content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). The total oxygen content was determined by the method of Inductively coupled plasma atomic emission spectrometry (1950). These findings are consistent with the idea that the brain is not a single unitary system, but rather a collection of many different systems, each with its own unique functions. This view of the brain is supported by a growing body of evidence from neuroscience, which shows that different regions of the brain are specialized for different tasks. For example, the motor cortex is responsible for controlling movement, while the visual cortex is responsible for processing visual information. This specialization of function is what allows the brain to perform a wide range of tasks with such efficiency.

The first of these is the fact that the system is not a simple one. It is a complex system, and the behavior of the system is not predictable. The second is the fact that the system is not a simple one. It is a complex system, and the behavior of the system is not predictable. The third is the fact that the system is not a simple one. It is a complex system, and the behavior of the system is not predictable.

Abstract

the following are the main components of the system:

- 1. The system is designed to be flexible and scalable.
- 2. It is built on a robust architecture.
- 3. The system is easy to use and maintain.
- 4. It provides a high level of security.
- 5. The system is cost-effective.

The system is designed to be flexible and scalable.

The system is built on a robust architecture.

The system is easy to use and maintain.

The system provides a high level of security.

The system is cost-effective.
